PROFESSIONAL SUMMARY

Full Stack Developer with 4.6+ years of professional experience designing, developing, and deploying enterprise web applications using C#, NET, Angular, SQL Server, and Microsoft Azure. Experienced in building secure RESTful Web APIs, responsive single-page applications, and event-driven cloud services following SOLID principles, design patterns, and clean, layered architecture. Entity Framework Core, Azure Functions, Azure Blob Storage, JWT/RBAC security, and SQL performance tuning. Works across the requirement analysis, development, code review, unit testing, deployment, and production support.

TECHNICAL SKILLS

Backend: C#, .NET, .NET Framework, ASP.NET Core Web API, ASP.NET Web API, RESTful API Development, LINQ, Dapper, Entity Framework Core (Code First/DB First), Dependency Injection (DI), Middleware, Asynchronous Programming (async/await), Object-Oriented Programming (OOP), SOLID Principles, DTOs, Exception Handling, Logging, Model Validation.

Frontend: Angular, TypeScript, HTML, CSS, SCSS.

Cloud - Microsoft Azure: Azure Functions (HTTP Trigger, Timer Trigger, Service Bus Trigger), Azure Blob Storage, Azure Service Bus, Microsoft Graph API, Azure App Service.

Databases: SQL Server.

Reporting: Telerik Reporting.

Architecture & Design: Microservices, N-Tier Architecture, Repository Pattern, Clean Architecture, Modular Monolith.

Security: JWT Authentication, Role-Based Access Control (RBAC), OAuth 2.0.

DevOps & Tools: Git, GitHub, Visual Studio, VS Code, SSMS, Postman, Swagger, JIRA, Source Tree, Service Bus Explorer.

Testing: API Testing with Postman, Debugging, Root Cause Analysis, Unit Testing, Regression Testing.

Methodologies: Sprint Planning, Code Reviews, Daily Stand-ups.

AI-Assisted Development: GitHub Copilot, Claude, ChatGPT, OpenAI, refactoring, and test scaffolding, Prompt Engineering.

Soft Skills: Problem Solving, Analytical Thinking, Team Collaboration, Communication, Adaptability, Learning New Technologies.

Additional Technical Knowledge: Azure Form Recognizer, Azure App Service Deployment Slots, Kubernetes/AKS Fundamentals, Docker, Azure DevOps, CI/CD.

PROFESSIONAL EXPERIENCE

Rheal Software - Pune, India | May 2022 - Present

Programmer Analyst (Full Stack Developer) | .NET Core, Angular, Azure, SQL Server

Clear Point Claims – Claims Management System (CMS)

- Developed and maintained end-to-end claim processing workflows using ASP.NET Web API 2, Angular 6, .NET Framework 4.7.2, Dapper, and SQL Server, following a layered architecture with separation of concerns across application layers.
- Designed and enhanced RESTful Web APIs for claim intake, claim management, notes, tasks, documents, inspections, invoicing, administration, and reporting. Used DTOs for structured data exchange and Swagger for API documentation.
- Developed responsive and dynamic Angular components, services, and reactive forms using TypeScript, RxJS, and Observables to support claim operations and asynchronous UI updates.
- Implemented event-driven background processing using Azure Functions and Azure Service Bus to handle claim imports, integration messages, report generation, and email/SMS notifications independently of interactive API requests.
- Integrated external insurance platforms, including XactAnalysis, Xactimate, and Symbility, to support claim/FNOL imports, estimate processing, claim status updates, notes, and document workflows.
- Used Azure Blob Storage to store documents, integration payloads, and logs, supporting document retrieval, troubleshooting, and reprocessing of failed integrations.
- Contributed to retry and message redelivery workflows for transient integration failures, with persisted retry attempts and audit logging to improve recovery from failed or out-of-order claim-related messages.
- Implemented and maintained JWT-based authentication and role-based access control (RBAC), supporting tenant-aware access restrictions across user and administrator operations.
- Developed and maintained inspection report and photo-sheet PDF generation using iText 7, ABCpdf and pdfHTML, integrating Azure Blob Storage for document storage and retrieval.
- Optimized SQL Server stored procedures and queries for high-volume claim data, investigating execution plans and indexing to improve data retrieval for claim grids, filtering, sorting, and pagination.

- Investigated production issues across API, Azure Functions, Service Bus, SQL Server, and third-party integrations; implemented fixes and supported reliable claim processing, failure recovery, and data consistency.

Grip – Claim Inspection & Document Management Platform

- Worked on claim management, inspection, document management, and invoicing modules using ASP.NET Core Web API (.NET 10) and Angular 21, implementing scalable RESTful APIs and responsive user interfaces.
- Designed and implemented backend data-access layers using Entity Framework Core (Code First), defining database entities, relationships, constraints, and migrations with SQL Server.
- Built reusable Angular components, services, reactive forms, and asynchronous data flows using TypeScript, RxJS, and Observables to support claim operations, inspection workflows, and document management.
- Engineered high-performance Azure Functions to process large inspection photo collections and generate ZIP archives by streaming files directly from Azure Blob Storage using the Azure SDK, significantly reducing memory consumption and improving processing efficiency.
- Integrated Azure Blob Storage for secure uploading, storing, and retrieving inspection photographs, generated PDF reports, and claim-related documents.
- Automated inspection report and photo-sheet PDF generation using iText 7 and ABCpdf, and implemented invoice generation based on inspection and estimate data, eliminating manual document preparation.
- Optimized Entity Framework Core LINQ queries, database operations, and API payloads to improve application performance and efficiently handle large claim records and extensive photo collections.
- Implemented scalable backend processing and asynchronous workflows to handle document generation and resource-intensive operations independently of interactive API requests.
- Worked on database design, API integration, code reviews, debugging, unit testing, deployment activities, and production support to maintain application reliability and performance.

Party Space Management System - Venue Booking & Event Scheduling Platform

- Delivered a venue booking and event scheduling application using ASP.NET Core Web API, Entity Framework Core (Code-First), Angular, and SQL Server.
- Implemented RESTful APIs for booking management, real-time availability checking, user registration, and payment history modules.
- Applied Repository and Unit of Work patterns with dependency injection to deliver a clean, testable, and scalable architecture; managed migrations, data seeding, and transactions for data consistency.
- Used LINQ for efficient data retrieval and filtering across venues, booking history, and payment records.
- Improved API response times by optimizing EF Core change tracking and loading strategies (AsNoTracking, eager vs. lazy loading) and reducing redundant API calls.

EDUCATION

- **Master of Computer Applications (MCA)**
  Sinhgad Institute of Management and Computer Application, Pune
  Savitribai Phule Pune University | GPA: 8.06 / 10 | June 2021 - June 2023

- **Bachelor of Business Administration - Computer Application (BBA-CA)**
  Dada Patil College, Karjat
  Savitribai Phule Pune University | GPA: 8.70 / 10 | June 2018 - June 2021

CERTIFICATIONS

- Government Certification in Computer Typing (GCC-TBC) - English 30 & 40 WPM; Marathi 30 & 40 WPM.
- Microsoft Certified - Azure Fundamentals (AZ-900) - In Progress.

ACADEMIC PROJECTS

- Construction Management System - Web-based project tracking and resource management application built with ASP.NET and SQL Server.
- Typing Institute Management System - Student enrolment, batch scheduling, and progress tracking system with role-based access.
- Contacts Management System - CRUD-based contact organizer with search, filtering, and categorization.
- Logger Platform – A centralized logging platform used to capture system logs, track exceptions, monitor application errors, and find solutions.
